The numeric value on Chrome Android (left) and iOS 12.2 (right). I've often seen sites using `type=tel` on an input to display a numeric keyboard, and that checks out as a workaround, but isn't semantically correct. If that bums you out, remember that `inputmode` supports patterns, we can add `pattern="\d*`" to the input for the same effect. That said, only use this if you are certain the input ...
