The theory of risk already has its traditions. A review of its classical results is contained in Bohlmann (1909). This classical theory was associated with life insurance mathematics, and dealt mainly with deviations which were expected to be produced by random fluctuations in individual policies. According to this theory, these deviations are discounted to some initial instant; the square ...

The theoretical foundation of ruin theory, known as the Cramér-Lundberg model (or classical compound-Poisson risk model, classical risk process or Poisson risk process) was introduced in 1903 by the Swedish actuary Filip Lundberg. Lundberg's work was republished in the 1930s by Harald Cramér.. The model describes an insurance company who experiences two opposing cash flows: incoming cash ...

orders are closely related, so that the answer to a non-contingent risk comparison problem always provides the answer to the corresponding contingent risk ...

New methods in the classical economics of uncertainty ...

The main aim of this paper is to introduce the notion of risk excess measure, to analyze its properties, and to describe some basic construction methods. To compare the risk excess of one distribution Q w.r.t. a given risk distribution P , we apply the concept of hemi-metrics on the space of probability measures. This view of risk comparison has a natural basis in the extension of orderings ...
